

# TISABAS™

REDUCING COSTS & INJURIES OF GROUND HANDLING OPERATIONS

Deployment Outcomes	What This Means to Carriers
<b>Reduced injuries</b>	Lowers workers' comp claims, time off the job, ramp agent physical stress, complaints and possible injuries/disability and workers comp/medical insurance claims
<b>Less damage to cargo</b>	Lowers number and dollar amount of payouts to customers, positively affects customer satisfaction and insurance costs
<b>Decreased damage to aircraft</b>	Reduced equipment repair costs, time out-of-service and possible scheduled delays
<b>Lightweight and easy set up</b>	Quick to position equipment with one agent, operates with two agents already working the job, no impact on flight schedules
<b>Equipment functions inside of aircraft; removeable</b>	No damage to aircraft exterior nor delays in flight schedules caused by malfunction of externally-positioned equipment, reduced damage to plane floor, no reduction to cargo capacity or fuel efficiency
<b>Minimizes inefficiencies</b>	Bags loaded faster and easier, moves more weight in less time, less bumped cargo, customers spend less time waiting at the carousel, agents can be deployed to other needed duties

Deployment Outcomes	What This Means to Carriers
<b>Reduces worker comp claims</b>	Lowers injuries, time away from the job, ramp agent disability and insurance claims, reduced requirement to hire and train additional agents or re-assign from other positions creating shortages elsewhere
<b>Meets floor bearing weight</b>	No FAA certification required, little risk to aircraft floor from equipment
<b>Reduces cargo loading time</b>	Helps to maintain on-time flight schedules and customer satisfaction, agents can be deployed to other needed duties
<b>Decreases agent turnover due to physical strain &amp; injury</b>	Reduced need to hire and train additional agents, experienced agents stay working on the job longer with an increased level of satisfaction
<b>Reduces operating costs</b>	Savings can be deployed to other aspects of operations
<b>Increases productivity</b>	Agents can be deployed to other needed duties, reduced need to hire and train a larger pool of agents
<b>Reduces manual work</b>	Workers comp injuries are reduced, lowers agent turnover due to physical strain, loading and unloading is completed more quickly, supporting maintenance of on-time schedules
<b>Significantly lower cost greater than other automated solutions</b>	Return-on-investment quickly attained and savings deployed to other operational needs
